To those having challenges:

How long must this go on? As an private user of Microsoft operating systems since DOS originated, for me 1975?? Microsoft has been most cooperative in solving any challenges that I have had. Just because they have been successful in developing good systems and continuing to do so, why must government keep anyone from doing so?

This computer is my 4th computer with each having Microsoft's operating systems,. Currently have Windows XP. It is about time we stop interfering in the lives of corporations and individuals who are intuitive to getting ahead of the crowds.
